PROFILE SUMMARY

DevOps and Site Reliability Engineer (SRE) with 5+ years of experience in **CI/CD automation, infrastructure operations, and production support** across enterprise environments. Hands-on experience with **Jenkins, Git/GitHub, Ansible, Docker, Linux, and artifact management & ticketing tools**, focusing on CI/CD pipeline implementation, configuration management, and deployment automation to improve release efficiency and system reliability.

Experienced in **incident management, on-call support, production troubleshooting, and disaster recovery**, applying SRE practices such as **monitoring, alerting** and service reliability improvement. Skilled in **Linux and Shell scripting** for automation and operational tooling.

Collaborative professional experienced in working with engineering, operations, and support teams to maintain high availability systems and stable production environments. Strong background in **technical documentation experience using MS Office and Confluence, reporting, and operational support**, with a focus on automation, DevOps practices, and continuous improvement.

WORK EXPERIENCE

May 2025 – Present | Professional Development (Relocated to Japan)

- Pursuing Japanese language studies (JLPT preparation)
- Enhancing DevOps expertise through self-learning and hands-on practice via online learning platforms

DevOps Engineer | EY LLP Pune

Dec 2024 - May 2025

- Industry: **Financial Services / Enterprise Consulting** | Client: **Banking Sector (Enterprise Big Data & Data Platform)**
- Project Type: DevOps Implementation, Release Automation & Production Operations

Key Technologies

DevOps | CI/CD Automation | Jenkins | XLR Automation | Chef Automate | Bitbucket | AWS Cloud | Linux & Windows Server Administration | Bash Scripting | Monitoring & Alerting | Incident & Production Support | Release & Change Management | High Availability | SLA Compliance | On-call Support

Responsibilities & Achievements

- Automated CI/CD pipelines for build and PR approval workflows, improving release efficiency and reducing manual effort.
- Implemented automation using XLR templates and Chef Automate, minimizing manual patching, system upgrades, and downtime.
- Supported stable production deployments and onboarded new pipelines through structured review and approval processes.
- Enhanced system reliability through proactive maintenance, monitoring dashboards, and capacity planning.
- Managed deployment of JAR/NAR artifacts, pipeline promotions, and environment-specific configurations.
- Maintained technical and operational documentation to support daily operations and onboarding.
- Resolved build and deployment incidents using BMC Helix, Rally, Microsoft Teams, and email notifications.

DevOps Engineer | Infosys Limited Pune

Dec 2022- Dec 2024

- Industry: **IT Services / Enterprise Consulting** | Client : **Telecommunications & Technology (AWS-based Enterprise Platforms)**
- Project Type: DevOps Implementation | CI/CD Automation | Production Support

Key Technologies

DevOps & CI/CD Automation | Jenkins | Git & GitHub | Ansible | SonarQube | JFrog Artifactory | Docker | Kubernetes (EKS) | AWS Cloud Infrastructure | GCP Migration Exposure | SaltStack Implementation | Monitoring & Alerting (Dynatrace, Grafana) | PagerDuty | Incident & Change Management | High Availability | SRE Practices | Linux | Python & Java Applications | On-call & Production Support

Responsibilities & Achievements

- Designed and optimized template-based CI/CD pipelines for non-production and production environments, improving deployment efficiency and reducing manual intervention.
- Automated build, deployment, and operational workflows using Jenkins (Groovy), Ansible, and scripting, increasing release consistency and team productivity.
- Investigated and resolved build and deployment failures using HCL, Jira, Slack, and alerting systems to ensure stable and timely release cycles.
- Monitored applications and cloud infrastructure with Dynatrace and Grafana, proactively identifying performance bottlenecks and availability issues.
- Managed production incidents and alerts via PagerDuty and Jira, performing root cause analysis (RCA) to maintain high system uptime and SLA compliance.
- Supported AWS (EKS) Kubernetes environments, containerized applications with Docker, implemented Change Requests (CRQs) for production releases, and contributed to cloud migration initiatives including GCP in hybrid/multi-cloud environments.

System Administrator | IBM India Pvt Ltd Hyderabad

Oct 2019 - Dec 2022

- Industry: **IT Infrastructure & Managed Services** | Client: **Banking Sector (ServiceNow-based Enterprise ITSM Platform)**
- Project Type: Infrastructure Operations | Cloud Readiness Support

Key Technologies

Linux & Windows Server Administration | Infrastructure Operations | ServiceNow (ITSM) | Incident Management | SLA Compliance | Change & Release Management | Disaster Recovery (DR) Support | Patch Management | On-call Support | Bash Scripting | Automation | Git Version Control | Citrix VM Servers

Responsibilities & Achievements

- Managed incident response, service requests, and problem management using ServiceNow ITSM, ensuring SLA and KPI compliance in enterprise environments.
- Performed software installation, upgrades, and configuration on Linux and Windows servers across production and non-production systems.
- Supported server upgrades, infrastructure changes, disaster recovery (DR) drills, and weekend patching, ensuring platform stability and business continuity.
- Participated in BAU operations, including DR failover/failback, production patching, and upgrades through approved Change Requests (CRs).
- Provided 24/7 on-call support for critical incidents in banking environments, minimizing service disruption and maintaining service availability.
- Managed Git repositories (branching, pull requests, basic code reviews) and developed Linux troubleshooting expertise, creating RCA reports and knowledge base documentation for continuous improvement.

TECHNICAL SKILLS & TECHNOLOGY STACK

• Skills and Tools

- **CI/CD & DevOps:** Jenkins, Git/GitHub, SonarQube, JFrog Artifactory, Confluence, NiFi
- **Cloud & Containers:** AWS Cloud, GCP Cloud Migration, Docker, Kubernetes
- **Scripting & Automation:** Groovy, Bash, Python
- **Monitoring & Alerting:** Dynatrace, Grafana, PagerDuty
- **Ticketing Tool & Incident Management:** Jira, ServiceNow, BMS Helix, HelpCentral
- **Other Tools:** DevSecOps Portal, Chef Automate, XLR Automate, Terraform, Ansible, MySQL
- **Operating Systems:** Linux, Windows, iOS

• Highlights

- Tools Upgrades, Configuration & Monitoring
- Problem Analysis and Issue Troubleshooting
- Support for Production issues debugging and Deployment
- Available for On-call Support on rotational basis
- CI/CD Build and Deployment Failure Debugging
- Agile, DevOps Processes & Culture Understanding
- Experience in Linux and Windows server handling issues
- Hands-on experience in Customer support and Production issues
- Incident and Change Management CRQ Support
- Provided knowledge transfer via technical documentation
- Documented RCA findings and automation processes to improve knowledge sharing and understanding

EDUCATION

• Bachelor's Of Computer Engineering

8.21 GPA

- Government College of Engineering, Awasari Pune (June 2016 - May 2019)
- Major in **Computer Engineering**

• Diploma in Information Technology

86.94%

- Government Polytechnic Kolhapur (June 2013 - May 2016)
- Major in **Information Technology and Computer**

ADDITIONAL INFORMATION

• Languages

- English : Business Proficiency
- Japanese : Beginner (N4 Level)
- Hindi : Business Proficiency
- Marathi : Native

• Certificates and Achievements

- Microsoft Certified: Azure Fundamentals
- AWS Cloud Practitioner Essentials: Training
- LinkedIn - Learning Kubernetes, Ansible, DevOps and Jenkins Essential Training

• Area Of Interest

- DevOps Practices and Technical Support
- Automation and Development
- Web Application Development and UI/UX Design
